

MODULAR CEILING_{AND} [... MORE]

Customisation and
unlimited possibilities

knauf

Modular system solutions from Knauf AMF: more comfort, more individuality, more scope

With the modular ceiling systems from Knauf AMF, you can make more out of every room. They not only improve the acoustics, the individual shapes, colours, textures and designs give every room a distinctive note. They create value for the people who live and work in them.

Unlimited possibilities

Our Knauf AMF system solutions offer you maximum flexibility and individuality. Whatever architectural concept you have in mind: We will certainly find the perfect ceiling solution - for new buildings as well as retrofitting existing rooms. From clean lines, muted colours and rigorous forms right through to playful textures and brightly coloured designs with custom prints, almost everything is possible. The basis for this exceptional range of diversity is our strong product brands which fulfil the highest requirements in fire protection, acoustics and aesthetics. Whether you prefer mineral, wood or metal tiles: Find everything that you need and create unique architectural masterpieces.

CUSTOMISATION AND UNLIMITED POSSIBILITIES FOR CEILING RAFTS, BAFFLES & WALL ABSORBERS

FORMS

Form follows vision.

Even the most unusual design possibilities,
harmoniously follow your visual frequency.

TEXTURES

Texture follows project.

Various textured surfaces impress with
complementary looks and magnificent finishes.

COLOURS

Colour follows architecture.

The wide colour palette is led by your ideas and their execution.

APPLICATIONS

Individuality follows idea.

The versatile applications of the surfaces create unique looks.

FORMS

ROUND WAVY CONVEX
SQUARE CURVED CONICAL
OVAL CONCAVE

PERFECTION MEETS CREATION

The only constant is change. Every imaginable form is not only conceivable but also feasible and can be created as an architectural, complex design element. To offer you unlimited design freedom, in short, we take on the challenge of casting your ideas into individual forms. Accurate and 100% appropriate, so that your great ideas can finally take form.

The background is a collage of architectural and organic forms. It features large, overlapping organic shapes in shades of orange, grey, and green. Interspersed within these shapes are photographs of architectural details: a ceiling with large circular light fixtures, a close-up of a textured brown material, and a green wall with circular light fixtures. The overall aesthetic is modern and design-focused.

FORMS

PURE DESIGN.

TEXTURES

BEVELLED DOTTED CURVED ROUNDED

PAINTED PLAIN TEXTURED
PERFORATED POLISHED

CONCEPTION MEETS VARIATION

In addition to form and colour, the surface of an object plays a role in its attractiveness. In a time where feasibility sets the standard, the design of visible surfaces defines freedom of design and realisation.

The variety of materials, their structures, textures and perforations are beyond imagination. You think it and we'll make the thought possible, in complete perfection.

A challenge that we are only too happy to take on, convincing target groups with uniqueness and with unexpected emotion.

TEXTURES

PURE MATERIAL DIVERSITY.

COLOURS

RED BLUE GREEN

YELLOW ORANGE

GREY BLACK PURPLE

... and many more!

INNOVATION MEETS INSPIRATION

We don't need to be named Le Corbusier to know, that colour can be as powerful in architecture as the plan or section. Fact is, Knauf AMF products span all the way from Goethe's theory of colour through to the red-hot, present trends.

The colour palette covers nearly all products and offers an unlimited playground for the design of ceilings, walls, baffles and rafts. Your fantasies and joy of experimenting can be as multifaceted as your colour chart.

We invite you to recognise and fully enjoy our decorative repertoire.

COLOURS

PURE VARIETY.

APPLICATIONS

IMAGE PHOTO WATER MARKED
CLOUDS MOTIF COLLECTION
COLOURS SKY

POTENTIAL MEETS PERSPECTIVE

Your motif is our mission.

With the VARIOLINE product range, all products can be individually printed according to the desired room effect. The palette ranges from the look of cool metal, the warm character of wood to bespoke motifs. Always harmonious and unique. A standard ceiling becomes the “heavens” and a plain wall becomes a “portal of dreams”.

With this, we want to ignite the next level of design freedom, where all conceivable looks can be created on all possible surfaces in order to give design independence through the diversity of options. Extremely simple, but also extremely surprising.

APPLICATIONS

PURE DIVERSITY.

Form stable and easy to handle
Fire protection
Low weight
100% recyclable

INNOVATIVE PRINTS FOR UNIQUE AND MEMORABLE ROOMS VARIOLINE

Nothing has to be as it seems. With innovative printing techniques, we give your ceiling and wall systems a very individual touch. The possibilities with VARIOLINE go well beyond our standard collection for AMF THERMATEx®. Independent systems such as ceiling rafts, baffles and wall absorbers can be made into extraordinary eye-catchers with optimum fire protection and acoustic performance. Choose from mineral, wood or metal tiles, which are then enhanced with a print for a complete new optic. Ceiling rafts become heavenly bodies, wall absorbers works of art and baffles become hanging gardens.

Modern architecture uses a lot of reflecting materials such as glass, steel and concrete. As a result, surfaces for acoustic purposes are often very limited. These are usually not sufficient to acoustically adjust a room for its function.

Ceiling rafts from Knauf AMF bring a breath of fresh air to architecture. Flexible, timeless, acoustically effective:
Sound in a room can be absorbed in a targeted way and thus the room acoustics optimised. The stainless steel cables give the impression of floating and weightlessness.

THERMATEX® Sonic modern

is a ceiling raft with an aluminium frame. It is delivered as standard with a white, fleece-coated surface but can be supplied in all colours and printed with motifs on request.

Installation

All ceiling rafts are delivered ready to install in one piece. This guarantees simple and quick installation. The flexible suspension with fine, stainless steel cables enables the height to be individually adjusted as required.

- 1 Alu-profile
- 2 THERMATEX® tile
- 3 Alu-main profile
- 4 Cable holder with cable
- 5 Ceiling mount

The number of cables can vary depending on the size and form of the ceiling raft.

Installation

The ceiling raft consists of an aluminium frame which is constructed on site and suspended from the soffit using adjustable cable hangers. Depending on the configuration type, ceiling tiles are lay in the frame.

THERMATEX® Sonic sky

The flexible ceiling raft system THERMATEX® Sonic sky offers architects and designers a high degree of creative freedom through its wide range of colours and forms.

The rafts consist of a self-supporting frame fixed to the ceiling with an adjustable suspension system and combined with THERMATEX® ceiling tiles.

THERMATEX® Alpha and THERMATEX® Alpha HD are particularly suitable. Discreet, almost invisible stainless steel cable suspension conveys the impression of weightlessness and elegance.

THERMATEX® Sonic element

THERMATEX® Sonic element is a ceiling raft concept, which does not require a frame! Particularly in architecturally demanding application areas such as foyers and reception areas, restaurants and modern offices, THERMATEX® Sonic element is the optimum solution combining effective design and acoustics.

The recessed fixing points and frameless, monolithic edges accentuate the impression of a floating raft.

Technical Properties

Humidity resistance	up to 95% relative humidity
Form	rectangular, round, oval, hexagonal, trapezoid, triangle, free forms forms

For communication to be easier, ceilings must always be in harmony with the room acoustics. A pleasant feeling of calmness and tranquillity only arises in acoustically well-designed rooms.

However, in some cases, the ceiling area is insufficient for optimum room acoustics. Here we recommend highly effective wall absorbers. They will most definitely meet your acoustic requirements, with the usual variety and flexibility.

THERMATEX® Line modern

THERMATEX® Line modern is a wall absorber consisting of a mineral tile with an aluminium frame. The fleece-coated surface of THERMATEX® Line Modern is white as standard but is also available in all colours and printed with a motif.

The wall panel is delivered in one piece ready to install and can be quickly and simply installed using eccentric screws and the installation key included in the delivery. Together with the underlying acoustic filling, the mineral tile achieves excellent sound absorption values.

Sound absorption values as per EN ISO 354

Wall absorber AMF Line Style

The customisable, printable fabric covered wall absorber with an elegant aluminium frame – that is AMF Line Style.

The alu-frame is fitted with an all-round groove in which the printed fabric is held using beading. This means the fabric cover can easily be removed and replaced with a new motif – quick, simple and no need for special tools! The profile is delivered with an integrated corner connection system.

Technical Properties

Surface	Fabric white or printed
Tile types	Foam tiles as absorption panels
Frame thickness	Basic light: 20 mm Basic ES: 26 mm Basic DS: 49 mm
Frame colour	Anodised aluminium natural E6-EV1
Weight	Basic light: approx. 3 kg/m ² Basic ES: approx. 5 kg/m ² Basic DS: approx. 6 kg/m ²

Surface designs

	CLASSIC Stretched fabric white
	EXCLUSIVE Stretched fabric with graphic print

- Basic light: Light-weight profile for single sided covers in small sizes
- Basic ES: Profile for all sizes with single sided covers
