

Due to the fact that stone is a natural product, each veneer may be considered as unique. Therefore, for stone veneers, colour shade and construction (structure) may change from batch to batch and even from panel to panel, being this a property of natural stone. For veneers, features such as islands and valleys are not considered as defects, but as part of the decor.

stone

Real Stone Veneers are an innovative product made from a thin layer of stone, either quartzite or slate, which are nominally 2mm thick. All have a resin reverse that is bonded with a high performance PUR adhesive to the substrate. As with all natural products each sheet is unique and will display many different aspects of the stone structure. The surface is pre-sealed meaning no further surface protection is needed. A cost effective, lightweight and innovative solution that replaces the need for a solid stone product. Available as standard in sheet size 2440 x 1220mm in thicknesses from 9 to 25mm MDF and sheet size 2440 x 1220mm dp-lite hollowcore in a variety of thicknesses.

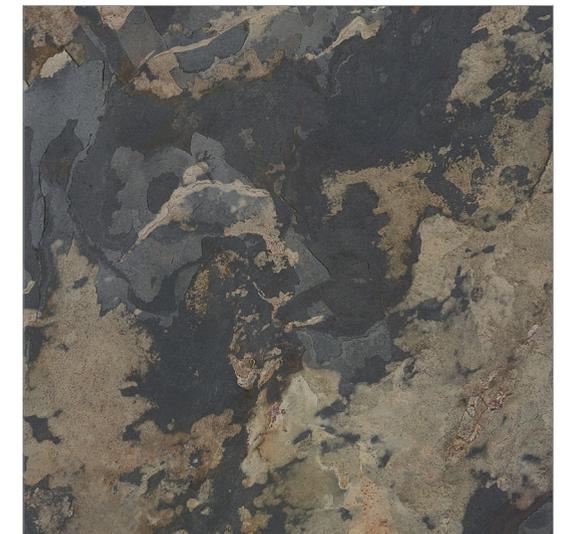

Due to the fact that stone is a natural product, each veneer may be considered as unique. Therefore, for stone veneers, colour shade and construction (structure) may change from batch to batch and even from panel to panel, being this a property of natural stone. For veneers, features such as islands and valleys are not considered as defects, but as part of the decor.
